106 BENCH

STRONG AND DURABLE

The Spanesi straightening bench was designed to withstand the most intense pulling stress. It is made of the most resistant and reliable construction materials available, so that it maintains its performance over the years.

ALL DAMAGE TYPES

From the lightest hits to the most complex repairs. The 106 contains a multi-purpose structural repair bench, ideal for quick small repairs and, above all, for repairing seriously damaged cars.

360° PULLING TOWER

Designed to facilitate pulling operations thanks to permanent attachment locations and an automatic locking mechanism located at various points around the bench. It comes with a pulling kit.

MOVABLE

Thanks to four removable wheels attached to the ends of the workbench, the straightening bench can be conveniently moved to the most suitable area for various repairs to be carried out.

EASY LIFTING AND LOWERING OF VEHICLES

With the aid of a lift, 1.6 metres in height, and a set of ramps and platforms, a vehicle can be lifted and lowered quickly and easily.

UNIVERSAL JIG SYSTEM

FIXING, PULLING AND MEASURING

The Spanesi Universal Jig System is an exclusive tool that guarantees OEM repairs to old and new cars, as well as those to come in the future. A state-of-the-art mechanical system allows any type of damage to be repaired with the accessories supplied. It is the only jig system that can fasten, pull and measure at the same time.

USER-FRIENDLY

Designed according to user-friendly, it uniquely allows for upward thrusts, downward pulls and repositioning of the crossbeams for the jigs themselves, using rack and pinion gears. Sliding on racks ensures quick and easy positioning of the heads at the correct reference points.

NO OPTIONAL EQUIPMENT=NO ADDITIONAL COSTS

A totally complete system. Using the Spanesi Universal Jig, damage to any vehicle can be repaired at any time, without the need to purchase any optional equipment.

TOUCH ELECTRONIC MEASURING SYSTEM

FAST AND EASY TO USE

A car can be measured and the damage easily diagnosed in just a few minutes. With 3 probes in varying lengths, the Touch Electronic Measuring System is the only tool that can reach the most complex points of the vehicle components structure, including external and mechanical parts.

GREATER PRECISION

In the diagnosis phase, the damage is analysed and assessed in detail. The post-repair measurements ensure that the vehicle is perfectly repaired and made safe again.

DYNAMIC REPAIRS

The innovative "Follow Me" system allows the operator to correctly realign the points in real time, thus making pulling operations more efficient and precise.

COMPLETE DATABASE

Database updates are released and sent annually. Updated data sheets of all models in circulation on the market will always be available to Touch users.

COMMERCIAL VEHICLES AND MPVS

The Touch Electronic Measuring System enables the diagnosis and repair of MPVs, SUVs and commercial vehicles.
